

Streamline calculation configuration from eDNA to PI

EDNA CALCULATION MIGRATION ACCELERATOR

Industry Challenges

- eDNA sunset leaves conversion gaps when migrating to PI
- Archive data migration utility exists, BUT does not migrate calculations
- Costly AF Hierarchy must be developed before implementing more complex and multi-step calculations
- Manual, tedious process to recreate PI System calculations

RoviSys Solution

- Template-based approach drives standardization of calculations
- Programmatically parse calculations from input
- Auto-generate lists of required tags and compare against PI System
- Recreate calculations in native AF Analysis syntax

Migration Options	Quality	Built-In Validation Process	Industry Specific Support	Cost
RoviSys Solution	High	✓	✓	75% Reduction from manual
Manual	Vulnerable to human error	✗	?	High
Other Toolsets	✗	✗	✗	✗
